

Hi-Tech Seals

Blue Bullet Packing

Stuffing Box Packing at its Peak!

Blue Bullet stuffing box packing is Hi-Tech Seals' exclusive design. This packing is composed of an engineered elastomeric compound, which is coated with a special protective coating. This unique combination of materials has many advantages, including:

- Enhanced temperature range of -40°C/-40°F to 160°C/320°F.
- Improved material strength that resists extrusion, abrasion, and wear.
- Increased resistant against hydrogen sulfide and CO₂ degradation.

Blue Bullet packing has been proven to outlast other stuffing box packing by up to 50%. Enhanced performance increases the time between maintenance cycles, saving wireline crews time and money.

On the Leading Edge of Quality

ISO 9001
REGISTERED QMS

Hi-Tech Seals has always been, and continues to be, on the forefront of Quality Management Standards. In 1996, we were the first seal company to be granted a Certificate of Registration with the ISO 9002:1994 standard of Quality Management. As we have grown to six locations across Canada and one in the United States, we have continued to register each branch, and update existing branches, to the most current of the ISO QM standards. Each revision of the standard or new registration required a full system audit, update or re-write of manuals, and employees training. The latest revision of ISO 9001 to the 2015 standard was no different.

Even though the 2015 revision was the most comprehensive yet, with a shift in philosophy from Quality management to Business management, Hi-Tech Seals has achieved its status as a registered ISO 9001:2015 company.
